

Rail Professional

Features list 2011

January

High speed Rail: A look at some of the issues surrounding high speed rail, with a focus on HS2

February

Preview of the Rail Business Awards: Round-up of the entries for each category

March

Scotland's railways: Focus on electrification and re-opening schemes north of the border

April

Rolling stock innovation: A look at the type of rolling stock manufacturers are currently designing for the UK's railways

May

Security: We will look at anti-terrorism measures, CCTV, station security, ticket office security, car park security and a host of other relevant areas

June

Railtex preview: Round-up of what visitors can expect to see at this year's show

July

Maintenance and depot equipment: This article will look at the kind of work carried out – and the equipment required – by maintenance depots. We will also be covering train and carriage refurbishment and the importance of maintaining existing rolling stock over new-build

August

Signalling: A closer look at signalling technology, including a case study of a signalling upgrade

September

Station refurbishment: Station refurbishment requires skills, products and expertise from numerous disciplines. We will be looking at the way in which work is carried out and examining the kinds of products that stations are investing in

October

Trackside maintenance: Highlighting track maintenance, as well as the demands of maintaining tunnels and bridges, and embankment stabilisation

November

Safety: This feature will take an in-depth look at both staff and passenger safety on the UK rail network, including the Tube, and the way in which safety is being improved

December

Freight: A closer look at issues on the rail freight network, including gauge enhancement, fluctuating markets and capacity constraints

Features may be subject to change during the year
